Sequence HD Fixed Seating

Sequence HD provides comfortable, condensed fixed seating with sufficient aisle room for easy use and cleaning. It's the ideal choice for lecture halls, classrooms, and meeting rooms.

Maximum density

With the narrowest row-to-row spacing (31") of any fixed seating, Sequence HD allows for the most efficient seating wherever space is at a premium. Side-to-side spacing is also flexible since arms are independent from seats.

Ease of egress

Row-to-row aisle space is easy to navigate since seats and tablet arms automatically fold to a stored position when vacated. Flip-up seats and durable beam-mounted floor supports make cleaning and maintenance easy, too.

Ergonomic comfort

Both Torsion on the Go! and Torsion Air shells feature thick seat cushions and contoured backs for outstanding comfort - even for extended periods of time. Patented flex-back mechanism gradually increases resistance over the full 12 degrees of back flex. Non-flex back option is required for the narrowest rows.

Adaptability

Choose either Torsion on the Go! or Torsion Air styles for flex-back comfort. Torsion on the Go! features a dimpled polypropylene or upholstered back, while Torsion Air features a breathable, contemporary mesh back. Available with tablet arms (three sizes), arms, or armless.

To adapt to various room configurations or constraints, fixed beams can be straight or curved and floors can be flat or sloped.

Gravity-activated seat automatically flips up when vacated.

Flex back option provides extraordinary comfort.

One-motion tablet arm mechanisms comply with the Life Safety Code. Three tablet sizes available.

Keep users connected with optional UL Listed, beam-mounted power and data. Power modules result in increased seat-to-seat spacing.
